		REFERENCES	3020898

THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.
THE APPRAISAL OF CONTENT IS TENTATIVE.
(FOR KEY SEE REVERSE)

Because of the high incidence of a disease resulting in the gradual loss of teeth among air crews of the Hungarian Air Force, medical experiments with dogs have recently been started by a veterinary clinic in Budapest, on the initiative and with the active cooperation of the Air Force. A preparation containing lead and arsenic is injected into the gums of dogs, and they are then flown to high altitudes in air force planes. Air force physicians are participating in the experiments, along with veterinary surgeons.
